

## AI-Pass Bug Report

Project: AI-Pass Enterprise AI Operating System

Environment: AI-Pass Demo Application

Browsers: Chrome, Firefox

Platform: Desktop 1280x720

=====

BUG-001: Marketplace result count does not update after filtering

=====

Severity: Medium

Priority: P2

Environment:

AI-Pass demo application

Chrome / Firefox

Desktop resolution 1280x720

Description:

The Marketplace page does not update the displayed result count after applying search or filtering actions.

Steps to Reproduce:

1. Log in using valid user credentials.
2. Navigate to the Marketplace page.
3. Apply a search query or filter.
4. Observe the displayed result count.

Expected Result:

The Marketplace result count should update dynamically and display the correct number of filtered applications.

Actual Result:

The application list changes, but the displayed result count remains unchanged.

Suggested Fix:

Update the result count state after filtering logic is executed and ensure the UI component re-renders with the updated value.

=====

BUG-002: Task title accepts whitespace-only value

=====

Severity: Low

Priority: P3

Environment:

AI-Pass demo application

Chrome

Desktop resolution 1280x720

Description:

The Simple Task form accepts input containing only whitespace characters as a valid task title.

Steps to Reproduce:

1. Log in using valid user credentials.
2. Navigate to the Simple Task page.
3. Enter only spaces into the task title field.
4. Submit the form.

Expected Result:

The system should reject whitespace-only input and display a validation message.

Actual Result:

The task is created successfully despite containing no valid text.

Suggested Fix:

Trim user input before validation and reject empty strings after whitespace removal.

=====

BUG-003: Login validation displays combined error message instead of field-level validation

=====

Severity: Low

Priority: P3

Environment:

AI-Pass demo application

Chrome / Firefox

Desktop and mobile viewport

**Description:**

The login form displays one general validation message instead of showing separate validation feedback for individual fields.

**Steps to Reproduce:**

1. Open the login page.
2. Leave email and password fields empty.
3. Click the login button.
4. Observe validation messages.

**Expected Result:**

Each invalid field should display a clear individual validation message explaining the required correction.

**Actual Result:**

A single combined validation message is displayed for all validation errors.

**Suggested Fix:**

Implement field-level validation messages for email and password inputs separately.
